traceptive use, according to sex, 1984 Canadian Fertility Study (CFS) and 1995 General Social Survey (GSS) Status 1984 CFS 1995 GSS

Table 1. Percentage distribution of respondents, by current con-

	(N=5,315)	Women (N=3,220)	Men (N=3,449)
Using reversible method	35.6	32.1	34.8
Pill	19.2	16.9	9.1
Condom	6.2	0.5	22.4

Using reversible method	35.6	32.1	34.8
Pill	19.2	16.9	9.1
Condom	6.2	9.5	22.4
IUD	5.7	2.6	1.3
Diaphragm	1.2	0.3	0.1
Foam	0.5	0.3	0.3
Rhythm	1.6	0.8	0.6
Withdrawal	0.8	0.5	0.1

Using paproversible methods	20.0	40.4	21.1	
Other†	0.4	1.2	1.2	
Withdrawal	8.0	0.5	0.1	
Rhythm	1.6	0.8	0.6	
Foam	0.5	0.3	0.3	
Diaphragm	1.2	0.3	0.1	
IUD	5.7	2.6	1.3	
Condon	0.2	0.0		

Diaphragm	1.2	0.3	0.1
Foam	0.5	0.3	0.3
Rhythm	1.6	0.8	0.6
Withdrawal	8.0	0.5	0.1
Other†	0.4	1.2	1.2
Using nonreversible methods	39.9	40.4	31.1
Female sterilization (tubal ligation)	24.2	17.3	10.6

Foam	0.5	0.3	0.3
Rhythm	1.6	0.8	0.6
Withdrawal	0.8	0.5	0.1
Other†	0.4	1.2	1.2
Using nonreversible methods	39.9	40.4	31.1
Female sterilization (tubal ligation)	24.2	17.3	10.6
Mala starilization (vacantomy)	0.7	10.6	10.1

i odili	0.0	0.0	0.0	
Rhythm	1.6	0.8	0.6	
Withdrawal	0.8	0.5	0.1	
Other†	0.4	1.2	1.2	
Using nonreversible methods	39.9	40.4	31.1	
Female sterilization (tubal ligation)	24.2	17.3	10.6	
Male sterilization (vasectomy)	8.7	10.6	13.1	
Storilized for modical reasons	7.0	12.5	77	

Sterilized for medical reasons 7.0 12.5 1.1

Other 24.6 27.5 33.8 Pregnant 3.8 2.4 4.0

Using no contraceptive method 20.8 25.1 29.8

Total 100.0 100.0 100.0

†The CFS includes douche; the GSS includes sponge. Note: All percentages are weighted;

all Ns are unweighted.
