

**TABLE 5. Odds ratios from logistic regression analyses assessing the association between selected variables and students' likelihood of initiating sexual intercourse between Time 1 and Time 3**

Variable	Odds ratio
<b>Intervention</b>	
Modified Reducing the Risk (ref)	1.00
Original Reducing the Risk	0.71
<b>Curriculum</b>	
Either intervention (ref)	1.00
Standard	2.42*
<b>Gender</b>	
Male (ref)	1.00
Female	0.83
<b>Race/ethnicity</b>	
Nonblack	0.92
Nonwhite	0.90
<b>Timing of intervention</b>	
Spring (ref)	1.00
Fall	1.50*
<b>Educational aspirations</b>	1.10
<b>City</b>	
Louisville (ref)	1.00
Cleveland	1.61**
<b>In relationship</b>	
No (ref)	1.00
Yes	3.06***

\* $p < .05$ . \*\* $p < .01$ . \*\*\* $p < .001$ . Notes: Time 1 data were collected near the beginning of ninth grade; Time 3, at the end of 10th grade. The race/ethnicity variables are each dichotomous; educational aspirations is an ordered categorical variable, with categories ranging from 10th or 11th grade to professional degree. ref=reference group.
