cive or deceptive sexual risk factors, by lifetime history of intimate partner violence, and odds ratios (and 95% confidence intervals) from logistic regression analyses examining associations between sexual risk behaviors and history of violence Sexual risk behavior or factor ΑII Those Those Odds ratio\*

TABLE 2. Percentage of women reporting standard sexual risk behaviors and coer-

		reporting violence	reporting no violence	
Standard				
>1 vaginal sex partner†	21	27	15	2.2 (1.3-3.7)
Unprotected vaginal seyt	64	62	65	10(06-15)

Standard				
>1 vaginal sex partner†	21	27	15	2.2 (1.3-3.7)
Unprotected vaginal sex†	64	62	65	1.0 (0.6-1.5)
Analsex	27	33	23	1.7 (1.1-2.7)
Unprotected anal sex†	11	15	8	2.2 (1.1–4.3)

>1 vaginal sex partner†	21	27	15	2.2 (1.3-3.7)
Unprotected vaginal sex†	64	62	65	1.0 (0.6-1.5)
Anal sex	27	33	23	1.7 (1.1-2.7)
Unprotected anal sex†	11	15	8	2.2 (1.1-4.3)
-				

>1 vaginal sex partner†	21	27	15	2.2 (1.3-3.7)
Unprotected vaginal sex†	64	62	65	1.0 (0.6–1.5)
Anal sex	27	33	23	1.7 (1.1-2.7)
Unprotected anal sex†	11	15	8	2.2 (1.1–4.3)
Coercive/deceptive				
Male partner infidelity	42	58	29	34(22-54)

Unprotected vaginal sex†	64	62	65	1.0 (0.6–1.5)
Anal sex	27	33	23	1.7 (1.1-2.7)
Unprotected anal sex†	11	15	8	2.2 (1.1–4.3)
Coercive/deceptive				
Male partner infidelity	42	58	29	3.4 (2.2-5.4)
Fear of requesting condom use	12	18	7	2 9 (1 4-6 0)

Experienced negative consequence of condom request 12 21

5.3 (2.4–11.6) 19 31 4.9 (2.6-8.9)

\*Adjusted for age, race or ethnicity, and recruitment site. †In the past three months. ‡Because of small cell size,

logistic regression was not performed; however, Fisher's exact test showed significant difference between

those reporting violence and those reporting no violence (p<.05).

Forced anal sex 3 <1

Coerced into not using a condom
