

TO Senator Patty Murray, Ranking Member, Senate Health, Education, Labor and Pensions Committee

FROM Jennifer J. Frost, DrPH, Principal Research Scientist, Guttmacher Institute
Mia R. Zolna, MPH, Senior Research Associate, Guttmacher Institute

DATE June 14, 2017

SUBJECT Response to Inquiry Concerning the Impact on Other Safety-Net Family Planning Providers of “Defunding” Planned Parenthood

We are writing in response to your inquiry for additional data on how excluding Planned Parenthood from receiving federal funds would impact other types of safety-net family planning providers, both with regard to the overall family planning safety net and specifically within the network of providers currently supported by the Title X national family planning program.

In order to respond, we have expanded upon the analysis that we conducted in response to your April 7, 2017 request for information concerning the availability of publicly funded contraceptive care to U.S. women, particularly from sites operated by Planned Parenthood and federally qualified health centers (FQHCs).¹ In this analysis, we assume that all the clients seeking contraceptive care who are currently served by Planned Parenthood health centers in each state would be distributed to other types of safety-net family planning centers in the same proportions that contraceptive clients are currently served by each of these other types of centers. We made the same assumptions for the Title X network. Key definitions of terms used in both of our analyses can be found on page 8 of our May 3, 2017 response.

As in our earlier analysis, the information presented here comes from 2015 data published in a recent Guttmacher report² or from special tabulations of those data. These data were obtained through a comprehensive census of the more than 10,000 safety-net health centers that provide contraceptive care in the 50 states and District of Columbia. Data were obtained on the location and numbers of female contraceptive clients served at all sites according to the type of center providing care (FQHC, health department, hospital, Planned Parenthood or other independent site). Health centers are considered safety-net family planning centers if they provide contraceptive care to at least 10 clients each year.

National-level findings are highlighted below; state-level data are detailed in the attached tables.

¹ Frost JJ and Zolna MR, Response to inquiry concerning the availability of publicly funded contraceptive care to U.S. women, memo to Senator Patty Murray, Senate Health, Education, Labor and Pensions Committee, New York: Guttmacher Institute, May 3, 2017, <https://www.guttmacher.org/article/2017/05/guttmacher-murray-memo-2017>.

² Frost JJ et al., *Publicly Funded Contraceptive Services at U.S. Clinics, 2015*, New York: Guttmacher Institute, 2017, <https://www.guttmacher.org/publicly-funded-contraceptive-services-us-clinics-2015>.

What would be the impact on all other types of safety-net family planning providers if they needed to serve the contraceptive clients currently served by Planned Parenthood health centers?

Nationwide, two million (32%) of the 6.2 million contraceptive clients served by safety-net family planning centers are served at Planned Parenthood health centers.

In order to serve all the female contraceptive clients currently served at health centers operated by Planned Parenthood throughout the 50 states and the District of Columbia, other types of safety-net centers would need to increase their client caseload, on average, by 47%. Depending on the make-up of the family planning safety net in each state, this varies from no increase to an increase of more than 200%. Nationwide:

- FQHC sites offering contraceptive care would have to increase their capacity to provide these services by 55%, or an additional one million contraceptive clients.
- Health department sites would have to increase their capacity to provide these services by 26%, or an additional 321,000 contraceptive clients.
- Hospital sites would have to increase their capacity to provide these services by 57%, or an additional 350,000 contraceptive clients.
- Other sites, such as those operated by independent agencies, would have to increase their capacity to provide these services by 57%, or an additional 293,000 contraceptive clients.

What would be the impact on all other types of Title X–funded providers if they needed to serve the contraceptive clients currently served by Title X–funded Planned Parenthood health centers?

Nationwide, 1.6 million (41%) of the 3.8 million contraceptive clients served by Title X–funded providers are served at Planned Parenthood health centers.

In order to serve all the female contraceptive clients currently served by Title X–funded health centers operated by Planned Parenthood throughout the 50 states and the District of Columbia, other types of Title X centers would need to increase their client caseload, on average, by 70%. Depending on the make-up of the Title X–funded network in each state, this varies from no increase to an increase of more than 700%. Nationwide:

- Title X–funded FQHC sites would have to increase their capacity to provide these services by 116%, or an additional 826,000 contraceptive clients.
- Title X–funded health department sites would have to increase their capacity to provide these services by 31%, or an additional 339,000 contraceptive clients.
- Title X–funded hospital sites would have to increase their capacity to provide these services by 77%, or an additional 151,000 contraceptive clients.
- Other Title X–funded sites, such as those operated by independent agencies, would have to increase their capacity to provide these services by 101%, or an additional 257,000 contraceptive clients.

Table 1. Numbers of contraceptive clients served at publicly funded centers, and numbers of additional and total contraceptive clients that would need to be served at non-Planned Parenthood centers to cover caseloads if there were no Planned Parenthood centers, by center type, all by state, 2015

State	Contraceptive clients served at publicly funded centers			FQHC sites			Health department sites		
	Number served at all centers	Number served at Planned Parenthood centers	% served at Planned Parenthood centers	Number of contraceptive clients served in 2015	Number of additional clients if no Planned Parenthood*	Total number of clients if no Planned Parenthood†	Number of contraceptive clients served in 2015	Number of additional clients if no Planned Parenthood*	Total number of clients if no Planned Parenthood†

*Number of additional clients that existing clinics would need to serve if there were no Title X–funded Planned Parenthood centers. †Hypothetical total number of clients that existing sites would need to serve if there were no Title X–funded Planned Parenthood centers. ‡In 2015, there were no Title X–funded centers of this type in the state.

Notes: Counts may not sum to total due to rounding. FQHC=federally qualified health center site that serves at least 10 contraceptive clients.

Table 2 (contd). Numbers of contraceptive clients served at Title X–funded centers, and numbers of additional and total contraceptive clients that would need to be served at non–Planned Parenthood Title X–funded centers to cover caseloads if there were no Title X–funded Planned Parenthood centers, by center type, all by state, 2015

State	Title X–funded hospital sites			Other Title X–funded sites			% increase in non–Planned Parenthood Title X contraceptive client caseload if no Title X Planned Parenthood centers
	Number of contraceptive clients served in 2015	Number of additional clients if no Title X Planned Parenthood*	Total number of clients if no Title X Planned Parenthood†	Number of contraceptive clients served in 2015	Number of additional clients if no Title X Planned Parenthood*	Total number of clients if no Title X Planned Parenthood†
