

# State Facts About Abortion

## Ohio

### National Background and Context

Each year, a broad cross section of people in the United States obtain abortions. In 2017, 862,320 abortions were provided in clinical settings in the United States.

The U.S. Supreme Court recognized the constitutional right to abortion in the 1973 *Roe v. Wade* decision and has reaffirmed that right in subsequent decisions.

However, since 2010, the U.S. abortion landscape has grown increasingly restrictive as more states adopt laws hostile to abortion rights. Between January 1, 2011 and July 1, 2019, states enacted 483 new abortion restrictions, and these account for nearly 40% of all abortion restrictions enacted by states in the decades since *Roe v. Wade*. Some of the most common state-level abortion restrictions are parental notification or consent requirements for minors, limitations on public funding, mandated counseling designed to dissuade individuals from obtaining an abortion, mandated waiting periods before an abortion, and unnecessary and overly burdensome regulations on abortion facilities.

### Abortion Incidence

- Approximately 862,320 abortions occurred in the United States in 2017. The resulting abortion rate of 13.5 abortions per 1,000 women of reproductive age (15-44) represents an 8% decrease from the 2014 rate of 14.6

- In 2017, 20,630 abortions were provided in Ohio, though not all abortions that occurred in Ohio were provided to state residents: Some patients may have traveled from other states, and some Ohio residents may have traveled to another state for an abortion. There was a 9% decline in the abortion rate in Ohio between 2014 and 2017, from 10.3 to 9.4 abortions per 1,000 women of reproductive age. Abortions in Ohio represent 2.4% of all

abortions in the United States.

### Where Patients Obtain Abortions

- In 2017, there were 1,587 facilities providing abortion in the United States, representing a 5% decrease from the 1,671 facilities in 2014. Sixteen percent of facilities in 2017 were abortion clinics (i.e., clinics where more than half of all patient visits were for abortion), 35% were nonspecialized clinics, 33% were hospitals and 16% were private physicians' offices. Sixty percent of all abortions were provided at abortion clinics, 35% at nonspecialized clinics, 3% at hospitals and 1% at physicians' offices.

- There were 14 facilities providing abortion in Ohio in

2017, and 9 of those were clinics. These numbers represent a 25% decline in clinics from 2014, when there were 17 abortion-providing facilities overall, of which 12 were clinics.

- In 2017, 89% of U.S. counties had no clinics providing abortions. Some 38% of reproductive-age women lived in those counties and would have had to travel elsewhere to obtain an abortion. Of patients who had an abortion in 2014, one-third had to travel more than 25 miles one way to reach a facility.

- In 2017, some 93% of Ohio counties had no clinics that provided abortions, and 55% of Ohio women lived in those counties.

### Restrictions on Abortion

- A patient must receive state-directed counseling that includes information designed to discourage the patient from having an abortion, and then wait 24 hours before the procedure is provided. Counseling must be provided in person and must take place before the waiting period begins, thereby necessitating two trips to the facility.

- Health plans offered in the state's health exchange under the Affordable Care Act can only cover abortion in cases of life endangerment, or in cases of rape or incest.

- Abortion is covered in insurance policies for public employees only in cases of life endangerment, rape or incest.

- Medication abortion must be

provided using the FDA protocol.

- The parent of a minor must consent before an abortion is provided.
- Public funding is available for abortion only in cases of life endangerment, rape or incest.
- Most patients will undergo an ultrasound before obtaining an abortion, since the provider must test for a fetal heartbeat. The patient will be offered the option to view the image.
- An abortion may be performed at 20 or more weeks postfertilization (22 weeks after the last menstrual period) only in cases of life endangerment or severely compromised health. This law is based on the assertion, which is inconsistent with scientific evidence and has been rejected by the medical community, that a fetus can feel pain at that point in pregnancy.
- The state prohibits abortions performed in response to genetic anomaly.
- The state requires abortion clinics to meet unnecessary and burdensome standards related to their physical plant, equipment and staffing.
