## Table of Contents: National and State Tables

### Highlights

### Definitions and Notes

**Table A.** Number of women in need of publicly supported contraceptive services and supplies, 2006, number receiving public-sector contraceptive services, 2006, and the percentage of need for publicly supported care that is met by public-sector providers, 1994–2006

**Table 1.** Total number of women aged 13–44 and number of women in need of contraceptive services and supplies, by age, poverty status and race/ethnicity—2000, 2002 and 2006 national summary and 2006 regional and state detail

**Table 2.** Number of women in need of publicly supported contraceptive services and supplies, by race/ethnicity and need status (younger than 20 or aged 20–44 and under 250% of poverty)—2000, 2002 and 2006 National summary and 2006 regional and state detail

**Table 3.** Total number of publicly supported family planning clinics by type of provider, number of female contraceptive clients served, and number of Title X–supported clinics and clients served—2001 and 2006 national summary and 2006 regional and state detail

**Table 4.** Number of women in need of publicly supported contraceptive services and supplies, 1995, 2000 and 2006—national, regional and state summary

**Table 5.** Number of female contraceptive clients served by publicly supported family planning clinics, 1994, 2001 and 2006—national, regional and state summary

**Table 6.** Number of female contraceptive clients served by publicly supported family planning clinics and at Title X–supported clinics, both by type of provider—2001 and 2006 national summary and 2006 regional and state detail

**Table 7.** Number of female contraceptive clients younger than 20 served by publicly supported family planning clinics and at Title X–supported clinics, both by type of provider—2001 and 2006 national summary and 2006 regional and state detail

([www.guttmacher.org/pubs/win/index.html](http://www.guttmacher.org/pubs/win/index.html))

**Detailed Methodology for Estimating the Number of Women in Need of Contraceptive Services and Supplies in 2006** ([www.guttmacher.org/pubs/win/winmethods2006.pdf](http://www.guttmacher.org/pubs/win/winmethods2006.pdf))

**Detailed Methodology for Enumerating the Number of Women Receiving Public-Sector Contraceptive Services in 2006** ([www.guttmacher.org/pubs/win/providermethods2006.pdf](http://www.guttmacher.org/pubs/win/providermethods2006.pdf))

## Highlights

### *Need for Services*

- There were 66.4 million U.S. women of reproductive age (13–44) in 2006, an increase of 1% since 2000 (Table 1, column 1).
- More than half of these women (36.2 million) were in need of contraceptive services and supplies, because they were sexually active, able to get pregnant, and not currently pregnant or trying to get pregnant (Table 1, column 2; see definitions and notes).
- Some 17.5 million women were in need of *publicly funded* contraceptive services and supplies—they were in need of services and either were younger than 20 or had an income below 250% of the federal poverty level (\$41,500 for a family of three in 2006). This number represents an increase of more than 1 million women (7%) since 2000 (Table A, Table 2, columns 15–17).
- Thirty-three states experienced an increase in the number of women in need of publicly funded contraceptive care between 2000 and 2006; in 15 of these states, the change exceeded 10% (Table 4, column 41).

### *Characteristics of Women in Need*

- Among adult women in need of contraceptive services and supplies in 2006, 4.5 million were poor (<100% of poverty) and 8.0 million were low-income (100–249%). Between 2000 and 2006, the number of poor adult women in need increased by 10% (Table 1, columns 7–10).
- Among women in need of publicly supported contraceptive services and supplies in 2006, 71% (12.4 million) were poor or low-income adult women, and 29% (5.1 million) were women younger than age 20 and of any income level (Table 2, columns 16 and 17).
- Of the 17.5 million women in need of publicly supported care in 2006, 9.6 million were non-Hispanic white, 3.1 million were non-Hispanic black and 3.6 million were Hispanic (the remaining women were of other or mixed races/ethnicities; Table 2, columns 18, 21 and 24).
- Between 2000 and 2006, the number of women in need of publicly supported care who were Hispanic increased by 17% and the number who were black increased by 6%, while the number who were white increased 4% (Table 2, columns 18, 21 and 24).

### *Women Served*

- In total, 9.4 million women are estimated to have received publicly supported contraceptive care in 2006 (Table A).
  - Some 7.2 million women received contraceptive care from publicly funded clinics (of these, 1.8 million were teenagers); two-thirds (4.7 million women) were served at sites supported by the federal Title X program (Table 3, columns 33, 34 and 36).
  - An additional 2.2 million women are estimated to have received publicly supported contraceptive care from private doctors that was paid for through Medicaid (Table A).

- There were 8,199 publicly funded clinics providing contraceptive services in 2006; one-third were run by health departments, 27% by community health centers, 11% by Planned Parenthood affiliates, 9% by hospitals and 20% by other independent organizations (Table 3, columns 27–32).
- Among the 7.2 million contraceptive clients served by clinics, 36% were served at Planned Parenthood clinics, 29% at health departments, 14% at other independent clinics, 12% at community health centers and 9% at hospital outpatient clinics (Table 6, columns 53–57).
- Between 2001 and 2006, both the number of clinics and the number of women served by clinics increased 8% (Table 3, columns 27 and 33).
- The increase in clinic numbers was due entirely to greater numbers of community health centers and independent clinics; hospitals, health departments and Planned Parenthoods all declined in clinic numbers between 2001 and 2006 (Table 3, columns 28–32).
- Community health centers, other independent clinics and Planned Parenthood clinics experienced an overall increase in the numbers of clients served between 2001 and 2006 (Table 6, columns 53–57).
- Overall, the number of clients younger than 20 fell between 2001 and 2006 from 1.86 million to 1.79 million, a 4% decline (Table 7, column 64).

#### *Percentage of Need Met*

- In 2006, public-sector contraceptive care is estimated to have met 54% of the need for publicly supported contraceptive services and supplies (9.4 of the 17.5 million women in need of care were served; Table A).
- Publicly funded clinics were responsible for meeting 41% of the need for publicly funded contraceptive care, while services to Medicaid clients by private doctors met an additional 13% of the need for care (Table A).
- Between 1994 and 2006, the overall percentage of need met by publicly supported clinics improved slightly from 39% to 41% (Table A).
- Trends in the percentage of need met by clinics vary significantly among states, with about half of states experiencing increases in the percentage of need met between 1994 and 2006, and the other half experiencing declines in met need (Table A).
- Three states (Alaska, California and Oregon) experienced increases in of 50% or more in the proportion of need met by clinics, and another four states (Nebraska, New Mexico, South Dakota and Vermont) had increases of at least 30% (Table A).
- In contrast, five states (Arizona, Hawaii, Mississippi, Missouri and Tennessee) had declines in the proportion of need met by clinics of at least 30% (Table A).

## Definitions and Notes

### Key Definitions

- Women are defined as “***in need of contraceptive services and supplies***” during a given year if they are aged 13–44 and meet three criteria:
  - (1) they are sexually active, that is, they have ever had intercourse;
  - (2) they are fecund, meaning that neither they nor their partner have been contraceptively sterilized, and they do not believe that they are infecund for any other reason; and
  - (3) during at least part of the year, they are neither intentionally pregnant nor trying to become pregnant.
- Women are defined as “***in need of publicly funded contraceptive services and supplies***” if they meet the above criteria and have a family income under 250% of the federal poverty level (estimated to be less than \$50,000 for a family of four in 2006). All women younger than 20 who need contraceptive services are assumed to need publicly funded care, either because their personal incomes are under 250% of poverty or because of their heightened need—for reasons of confidentiality—to obtain care without depending on their family’s resources or private insurance.
- A “***publicly funded family planning clinic***” is a site that offers contraceptive services to the general public and uses public funds, including Medicaid, to provide free or reduced-fee services to at least some clients. These sites may be operated by a diverse range of provider agencies, including public health departments, Planned Parenthood affiliates, hospitals, community health centers and other independent organizations. In this report, these sites are referred to as “clinics”; other Guttmacher Institute reports may use the synonymous term “center.”
- A “***female contraceptive client***” is a woman who has made one initial or one revisit for contraceptive services during the 12-month reporting period. This includes all women who have received a medical examination related to provision of a contraceptive method. It also includes all active contraceptive clients who have made supply revisits, who received counseling and method prescription but deferred the medical examination or who choose nonmedical contraceptive methods, even if a medical examination was not performed, so long as a chart is maintained.

### Notes

- All population and client estimates have been rounded to the nearest 10. County totals, therefore, do not always sum to state totals. Subgroup totals do not always sum to state or county totals for the same reason.
- Race/ethnicity subgroup totals do not sum to the overall total because the subgroup of women reporting “other or multiple races” is not shown separately, although it is included in all other totals.
- Data on the number of female contraceptive clients served were available for 84% of all family planning clinics. Client numbers for clinics with missing or incomplete data have been estimated based on prior data or the experience of similar clinics. For additional methodological detail see [www.guttmacher.org/pubs/win/providermethods2006.pdf](http://www.guttmacher.org/pubs/win/providermethods2006.pdf) and [www.guttmacher.org/pubs/win/winmethods2006.pdf](http://www.guttmacher.org/pubs/win/winmethods2006.pdf).
- Regions are constituted as follows: Region 1—Connecticut, Maine, Massachusetts, New Hampshire, Rhode Island and Vermont. Region 2—New Jersey and New York. Region 3—Delaware, District of Columbia, Maryland, Pennsylvania, Virginia and West Virginia. Region 4—Alabama, Florida, Georgia, Kentucky, Mississippi, North Carolina, South Carolina and Tennessee. Region 5—Illinois, Indiana, Michigan, Minnesota, Ohio and Wisconsin. Region 6—Arkansas, Louisiana, New Mexico, Oklahoma and Texas. Region 7—Iowa, Kansas, Missouri and Nebraska. Region 8—Colorado, Montana, North Dakota, South Dakota, Utah and Wyoming. Region 9—Arizona, California, Hawaii and Nevada. Region 10—Alaska, Idaho, Oregon and Washington.

Note: na=not available.

\*Women in need of publicly supported services include adult women below 250% of the federal poverty level, plus all women younger than 20 who are in need of contraceptive services and supplies.

\*\*National percentages of met need include all women receiving contraceptive care from publicly supported clinics, as well as Medicaid clients who received such care from private doctors. Regional and state estimates are for need that is met by clinics only and exclude women who receive Medicaid-covered services from private providers. All estimates are for women receiving contraceptive services from a medical provider and exclude users of nonprescription methods who did not visit a contraceptive service provider in 2006. In addition, the numbers of women served by publicly supported clinics may include some women who do not fit the income definition of women in need, but who choose to receive care from a clinic. The 2001–2002 column is based on women served in 2001 and women in need in 2002; 1994–1995 column is based on women served in 1995 and women in need in 1995.

**Table 1. Total number of women aged 13–44 and number of women in need of contraceptive services and supplies, by age, poverty status and race/ethnicity—2000, 2002 and 2006 national summary and 2006 regional and state detail**
