

**Table 3. Odds ratios (and 95% confidence intervals) from logistic regression analysis showing adolescents' likelihood of responding inconsistently to questions about first sexual intercourse (n=684)**

Variable	Odds ratio
<b>Gender</b>	
Male	13.74* (9.14–20.67)
Female	1.00
<b>Socioeconomic status</b>	
Very low	1.49* (1.01–2.18)
Middle-low or low	1.00
<b>Ever used alcohol</b>	
Yes	1.29 (0.87–1.91)
No	1.00
<b>Church attendance</b>	
≥ weekly	0.83 (0.57–1.22)
<weekly	1.00
<b>Living arrangement</b>	
Two-parent home	1.00
Other	0.97 (0.65–1.44)
<b>Family life education intervention</b>	
Yes	1.61* (1.10–2.36)
No	1.00
