

Table 2. Percentage distribution of postabortion clients at the ZTB Women's Health Education and Research Hospital, by method adopted following abortion, according to timing of the procedure relative to the intervention

Method	6 mos. preceding intervention (Dec. 1990– May 1991)	6 mos. following initiation of intervention (July–Dec. 1992)
Condom	44	25
IUD	20	49
Tubal ligation	1	15
Pill	0	8
Vasectomy	0	1
None	35	2
Total	100	100

Note: Contraceptive implants and injectables were not introduced into the program until after 1991. The dates do not necessarily correspond to the six months immediately preceding or following initiation of the intervention, but instead were selected because
