
Table 4. Observed and expected contraceptive prevalence and effect of sex preference on prevalence in Matlab project area, by year

Prevalence	1983	1988	1993
Observed	40.0	54.0	63.9
Expected	43.4	58.4	67.6
Effect*	-8.5	-8.2	-5.8

*Calculated as $([\text{Observed prevalence} - \text{Expected prevalence}] / \text{Observed prevalence}) \times 100$.
