

**TABLE 3. Percentage of married women aged 15–24 who had a demand for contraception or were using a method, by survey, according to area**

Measure	Comparison	Intervention
<b>Demand</b>		
Baseline	23.8	25.0†
Follow-up	26.7‡	40.2
<b>Use</b>		
Baseline	2.8	4.3†
Follow-up	4.7‡	20.7

†Significantly different from the percentage at follow-up at  $p < .001$ . ‡Significantly different from the percentage for the intervention area at  $p < .001$ .  
 Note: Women have a demand for contraception if they want to wait at least two years to have a child or do not want any more children.
