

TABLE 4. Percentage of diaphragm users reporting that selected reasons were moderately to extremely important in their decision to use the method

Reason	%
Dissatisfied with previous method	72.3
Health care provider recommended the diaphragm	61.3
Medical problems with previous method	47.9
Wanted a method that provides dual protection against both pregnancy and some STDs	23.3
Partner didn't like previous method	20.1
Wanted to get pregnant, and decided to use the diaphragm while a hormonal method wore off	9.3

Notes: Data are missing from two women for dissatisfied with previous method, three for health care provider recommended the diaphragm, and one for wanted to get pregnant and decided to use the diaphragm while a hormonal method wore off, all because they responded don't know. For partner didn't like previous method, data are missing for one woman, who declined to respond.
