FIGURE 3. A model of abortion and contraceptive use among women aged 16–44, Georgia, March 2004 to February 2005

All women aged 16–44

Used contraceptives (294)

Do not use contraceptives (706)

Expected pregnancies

Used a modern method (167)

Do not use contraceptives (706)

High risk (111)

Low risk (173)

No risk (101)

Never had sex (322)

Expected abortions

Used a traditional method (127)

High risk (111)

Low risk (173)

No risk (101)

Never had sex (322)

Total expected abortions (101)

Notes: Figures in parentheses are rates per 1,000 woman-years. High risk, low risk and no risk refer to risk of unintended pregnancy. Sum of figures in risk groups does not equal the number of contraceptive nonusers because of rounding.
