

TABLE 5. Observed and simulated maternal mortality risks, assuming distribution of pregnancy outcomes or case-fatality rates of the other area

Distribution of outcomes	Case-fatality rates		Difference
	MCH-FP	Comparison	
MCH-FP	292	351	59
Comparison	301	369	68
Difference	9	18	na

Notes: The difference between the actual maternal mortality risks in the two areas is 77 deaths per 100,000 pregnancies. MCH-FP=Maternal Child Health-Family Planning. na=not applicable.
