

**TABLE 1. Percentage distribution of pharmacy vendors, by responses to simulated clients who asked for a drug to interrupt a pregnancy, Mexico, 2007**

Response	%
<b>Spontaneously recommended a drug to interrupt a pregnancy</b> (N=558)	
Yes	23.7
No	76.3
<b>Drugs spontaneously recommended by vendors†</b> (N=176)	
Misoprostol only (sold as Cytotec)	56.2
Combination of misoprostol with diclofenac‡	11.4
Methotrexate	2.3
Hormonal injectables	12.5
Oxytocin	3.4
Emergency contraception	13.1
Other§	1.1
<b>Recommended an abortifacient drug or a combination of such drugs</b> (N=132)	
Yes	81.8
No	18.2
<b>Drugs and combination of drugs spontaneously recommended by vendors</b> (N=132)	
Only misoprostol	49.2
Only drugs combining misoprostol and diclofenac	10.6
Combination of abortifacient drugs with nonabortifacient drugs	22.0
Combination of nonabortifacient drugs	18.2
<b>The preferred drug††</b> (N=132)	
Cytotec	73.5
Combination of misoprostol with diclofenac	7.6
Hormonal injectables	6.1
Oxytocin	0.7
Emergency contraception	11.4
Other‡‡	0.7
Total	100.0

†Some of the vendors recommended more than one drug; 176 drugs were recommended by 132 pharmacy vendors. ‡Artren, Artrotec and Artrenac. §Includes an unspecified contraceptive method and an unspecified natural product. ††If vendors recommended more than one drug, the simulated clients were instructed to ask which was the preferred drug. ‡‡An unspecified natural product.
