

TABLE 4. Among respondents aged 16 at the start of the year of first interview, odds ratios (and 95% confidence intervals) from multiple logistic regression analysis identifying associations between reports of relationship, sexual and other experience and use of audio-CASI rather than face-to-face interviews, by gender

Experience	Male (N=422)		Female (N=293)	
	Unadjusted	Adjusted	Unadjusted	Adjusted
Relationship/sex				
Ever had boyfriend/girlfriend	0.44 (0.26–0.75)**	0.45 (0.25–0.80)**	0.69 (0.36–1.32)	0.69 (0.34–1.38)
Ever had sex‡	1.13 (0.66–1.92)	1.16 (0.68–1.98)	2.15 (1.14–4.07)*	1.84 (1.08–3.14)*
Ever had sex with relative/teacher	3.16 (1.01–9.23)*	2.95 (0.98–8.84)†	na§	na§
Other				
Alcohol use††	0.75 (0.25–2.27)	0.75 (0.24–2.38)	na§	na§
Petty theft‡‡	0.51 (0.16–1.62)	0.54 (0.18–1.62)	0.38 (0.06–2.23)	0.21 (0.04–1.07)†

*p<.05. **p<.01. ***p<.001. †p<.10. ‡Aggregate measure based on respondent reporting an age at first sex or having had sex with a particular partner type, or both. §Since no females reported sex with a relative or teacher or alcohol use in face-to-face interviews, interview mode perfectly predicts reporting of these outcomes. ††Respondents attending school at the time of interview were asked if they had drunk alcohol in the past school year; those not in school were asked about use since January 1, 2009. ‡‡Respondents were asked if they had stolen something from a kiosk or vendor; the time frames were the same as for the alcohol use measure. Notes: Adjusted models control for the social and demographic characteristics shown in Table 1, with the exception of age. na=not applicable.
