

**TABLE 4. Odds ratios (and 95% confidence intervals) from logistic regression analyses assessing associations between emergency contraception use and selected participant characteristics**

Characteristic	Odds ratio
<b>Clinic's emergency contraception access policy</b>	
Advance	2.63 (1.44–4.81)**
Emergent (ref)	1.00
<b>Race/ethnicity†</b>	
Non-Hispanic black (ref)	1.00
Non-Hispanic white	0.65 (0.35–1.20)
Hispanic	0.84 (0.32–2.18)
Other	4.59 (2.30–9.16)***
<b>Importance of religion†,‡</b>	0.81 (0.56–1.18)
<b>Education†,‡</b>	0.70 (0.49–1.01)
<b>Employment†,‡</b>	1.17 (0.89–1.54)
<b>Income from partner†</b>	
Yes	1.37 (0.89–2.13)
No (ref)	1.00
<b>Perceived pregnancy probability†,§</b>	1.01 (1.00–1.02)
<b>Familiar with emergency contraception†,‡</b>	
	1.97 (1.37–2.85)***
<b>Previously offered emergency contraception†</b>	
Yes	0.78 (0.44–1.32)
No (ref)	1.00
<b>New partner in past 30 days</b>	
Yes	2.03 (1.19–3.47)**
No (ref)	1.00
<b>Sex without birth control in past 30 days</b>	
Yes	2.00 (1.22–3.23)**
No (ref)	1.00
<b>Main birth control method in past 30 days</b>	
None (ref)	1.00
Pill	1.36 (0.70–2.40)
Condom	1.83 (1.09–3.07)*
Injectable	0.99 (0.45–2.18)
Other	1.11 (0.34–3.58)
<b>Feelings about pregnancy in next 12 months‡</b>	
	1.35 (1.12–1.61)**
