

TABLE 3. Odds ratios (and standard errors) from regression analyses examining the likelihood that women reported that their unsafe abortion resulted in negative consequences for their children or loss of productivity

Measure	Odds ratio	
	Negative consequences for children‡	Loss of productivity
PRIMARY INDEPENDENT VARIABLES		
No. of nights at facility		
0 (ref)	1.00	1.00
1	1.76 (0.250)*	2.20 (0.203)***
≥2	1.63 (0.221)*	2.39 (0.182)***
Postabortion care expenses		
Low (ref)	1.00	1.00
High	0.91 (0.187)	1.16 (0.167)
WOMEN'S CHARACTERISTICS		
Age		
≤19 (ref)	1.00	1.00
20–29	0.18 (0.627)**	1.00 (0.219)
≥30	0.17 (0.650)**	0.97 (0.320)
No. of living children§		
0 (ref)	na	1.00
1–2 (ref)	1.00	1.50 (0.232)†
≥3	0.39 (0.228)***	1.42 (0.301)
Marital status		
Not married (ref)	1.00	1.00
Married	2.24 (0.226)***	1.58 (0.193)*
Attending school		
No (ref)	1.00	1.00
Yes	0.70 (0.791)	0.97 (0.253)
Educational attainment		
≤primary (ref)	1.00	1.00
>primary but not >secondary	1.19 (0.217)	0.89 (0.185)
>secondary	0.79 (0.365)	0.72 (0.286)
Residence		
Rural (ref)	1.00	1.00
Urban	1.24 (0.221)	0.99 (0.183)
Wealth		
Poorest (ref)	1.00	1.00
Middle	0.47 (0.233)**	1.12 (0.199)
Wealthiest	0.40 (0.310)**	1.17 (0.248)
<i>Intercept</i>	<i>1.978 (0.675)**</i>	<i>−0.038 (0.293)</i>

*p<.05. **p<.01. ***p<.001. †p<.10. ‡Among respondents with children. §Reference category is 0 for loss of productivity and 1–2 for negative consequences for children. Notes: Missing values were dropped using listwise deletion, resulting in sample sizes of 568 for negative consequences for children and 919 for loss of productivity. na=not applicable.
