

TABLE 2. Unadjusted odds ratios from logistic regression analyses comparing risk of maternal mortality in selected pairs of pregnancy outcomes, by time period and area

Comparison	1989–1999			2000–2008†		
	All	Comparison area	MCH-FP area	All	Comparison area	MCH-FP area
All pregnancy terminations relative to live birth	7.70***	7.45***	8.41***	1.71	2.04	1.01
Menstrual regulation‡ relative to live birth	4.11***	5.21***	1.84	0.87	1.30	Undefined§
Abortion relative to live birth	12.02***	10.02***	17.14***	4.85**	4.74*	4.90
Menstrual regulation‡ relative to induced abortion	0.34*	0.52	0.11*	0.18*	0.27	Undefined§

*p<.05. **p<.01. ***p<.001. †Data not available for 2001. ‡Includes pregnancy terminations performed by dilation and curettage, which accounted for 2% of terminations in this category. §Odds ratio could not be calculated because no deaths occurred in the menstrual regulation group.
