Notes: All rates are the number of events per 1,000 women in a specified age-group. Rates among women younger than 15 are calculated as the number of events per 1,000 women aged 14; rates among women aged 40 or older are calculated as the number of events per 1,000 women aged 40–44. Rates among women aged 15–44 are calculated as the number of events experienced by individuals of all ages per 1,000 women aged 15–44. Data are tabulated according to the individual's age at the pregnancy outcome. Pregnancy rates include estimated number of pregnancies ending in miscarriage or stillbirth.

Notes: Includes estimated number of pregnancies ending in miscarriage or stillbirth. Data are tabulated according to the individual's age at the pregnancy outcome and rounded to the nearest 10. The number of abortions and births among women aged 15–44 includes events experienced by individuals of all ages.

Notes: All rates are the number of events per 1,000 women in a specified age-group. Rates among women younger than 15 are calculated as the number of events per 1,000 women aged 14; rates among women aged 40 or older are calculated as the number of events per 1,000 women aged 40–44. Rates among women aged 15–44 are calculated as the number of events experienced by individuals of all ages per 1,000 women aged 15–44. Data are tabulated according to the individual's age at the pregnancy outcome.

Notes: All rates are the number of events per 1,000 women in a specified age-group. Rates among women younger than 15 are calculated as the number of events per 1,000 women aged 14; rates among women aged 40 or older are calculated as the number of events per 1,000 women aged 40–44. Rates among women aged 15–44 are calculated as the number of events experienced by individuals of all ages per 1,000 women aged 15–44. Data are tabulated according to the individual's age at the pregnancy outcome.

*Abortion estimate based on the number of abortions among all women in the state and the proportion of abortions obtained by women of the same age in neighboring or similar states. †Abortion estimate based on the number of abortions among all women in the state and the proportion of abortions obtained by women of the same age nationally. ‡Abortion estimate based on the number of abortions among all women in the state and the proportion of abortions obtained by women of the same age in the year prior or subsequent to the estimate. §Abortion estimate for 18–19-year-olds based on the number of abortions among all women in the state, the proportion of abortions to 15–19-year-olds in the state, and the proportion of abortions to 18–19-year-olds among 15–19-year-olds in neighboring states. **Abortion estimate for 18–19-year-olds based on the number of abortions among all women in the state, the proportion of abortions to 15–19-year-olds in the state, and linearly interpolated proportion of abortions to 15–17-year-olds among 15–19-year-olds from surrounding years.

Notes: Rates are the number of pregnancies per 1,000 women aged 18–19. Data are tabulated according to the individual's age at the pregnancy outcome. u=unavailable.
