
Alternative pregnancy rates per 1,000 women aged 15–44 in California, Idaho and South Dakota, by desire for pregnancy response options, 2014

State	Wanted then or sooner	Wanted later or unwanted	Wasn't sure
California*	42	43	10
Idaho†	61	33	u
South Dakota†	60	40	u

*California survey did not include a response option for “I wanted to be pregnant sooner”; as a result, the numerator in the rate for “then or sooner” only includes births to individuals who responded “I wanted to be pregnant then.” †Idaho and South Dakota did not include “I wasn't sure” as a response category on their questionnaires. *Note:* u=unavailable.
