TABLE 3. Relative risk ratios (and 95% confidence intervals) from multinomial logistic regression analysis assessing the likelihood of women reporting various contraceptive use behaviors rather than inconsistent condom use, other method use or nonuse, by selected background, behavioral and contraceptive use variables

Variable	Consistent condom use only (N=50)	Use of nonbarrier modern method without consistent condom use (N=124)	Dual method use (N=26)
Recruitment zone			
Matsapha/Manzini (ref)	1.00	1.00	1.00
Mbabane	0.80 (0.25–2.52)	0.78 (0.37–1.66)	1.72 (0.21–14.11)
Piggs Peak/Lavumisa	1.03 (0.22–4.78)	1.77 (0.74–4.22)	4.02 (0.42–38.11)
Age
